Standard Source Control Response Workflow

Why We're Here

2015 Conference and Exhibition

In order to receive a permit to drill in the U.S. Gulf of Mexico, regulations require operators to have the ability to deploy containment resources for a loss of well control.

Operators must have a well containment plan that includes:

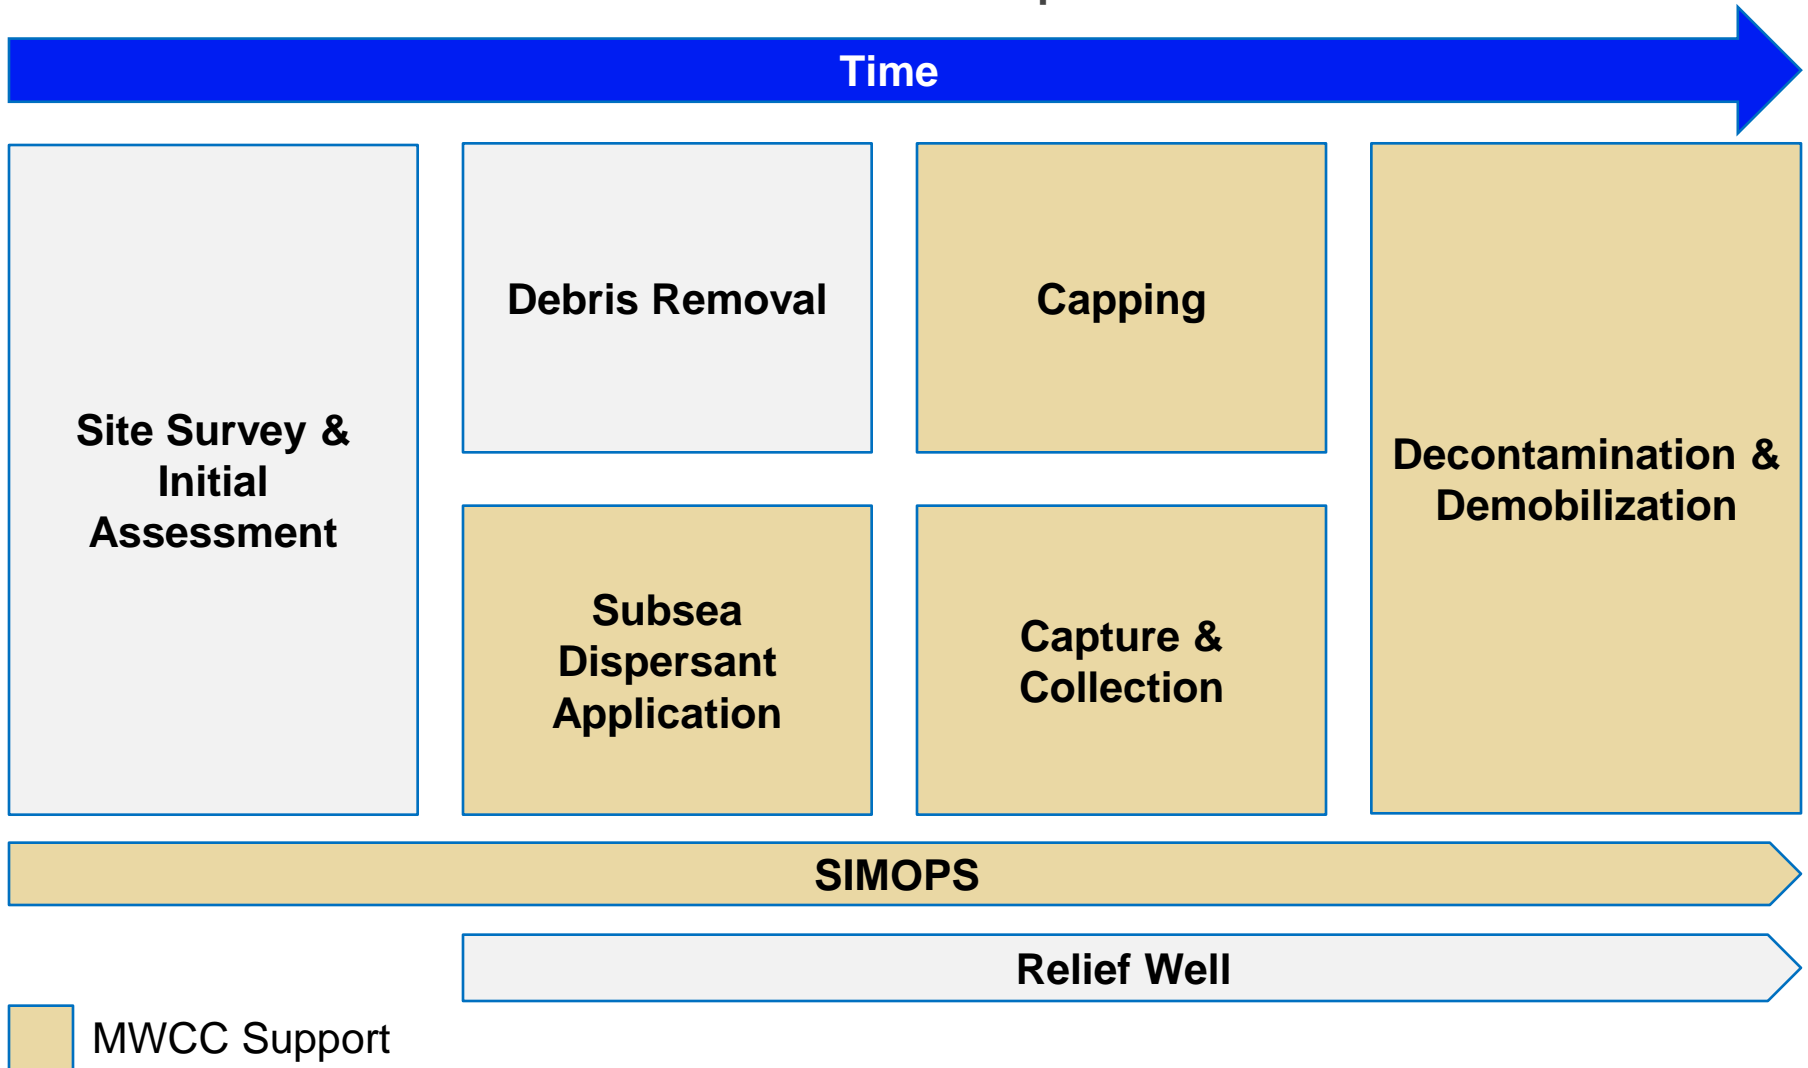

- Responsible Party Checklist – planned actions and resources to respond to a loss of well control
- Coverage from a well containment equipment provider

Source Control Support Role We Play

2015 Conference and Exhibition

Standard Source Control Response Workflow

Source Control Support Areas

2015 Conference and Exhibition

Subsea Dispersant

- Dispersant Injection Equipment
- Water Column Monitoring
- Dispersant Stockpile

Capping

- Equipment
- Deployment Procedures

Capture & Collection

- Interim Collection
- Cap and Flow

SIMOPS

- Guidelines
- Advisor to Support

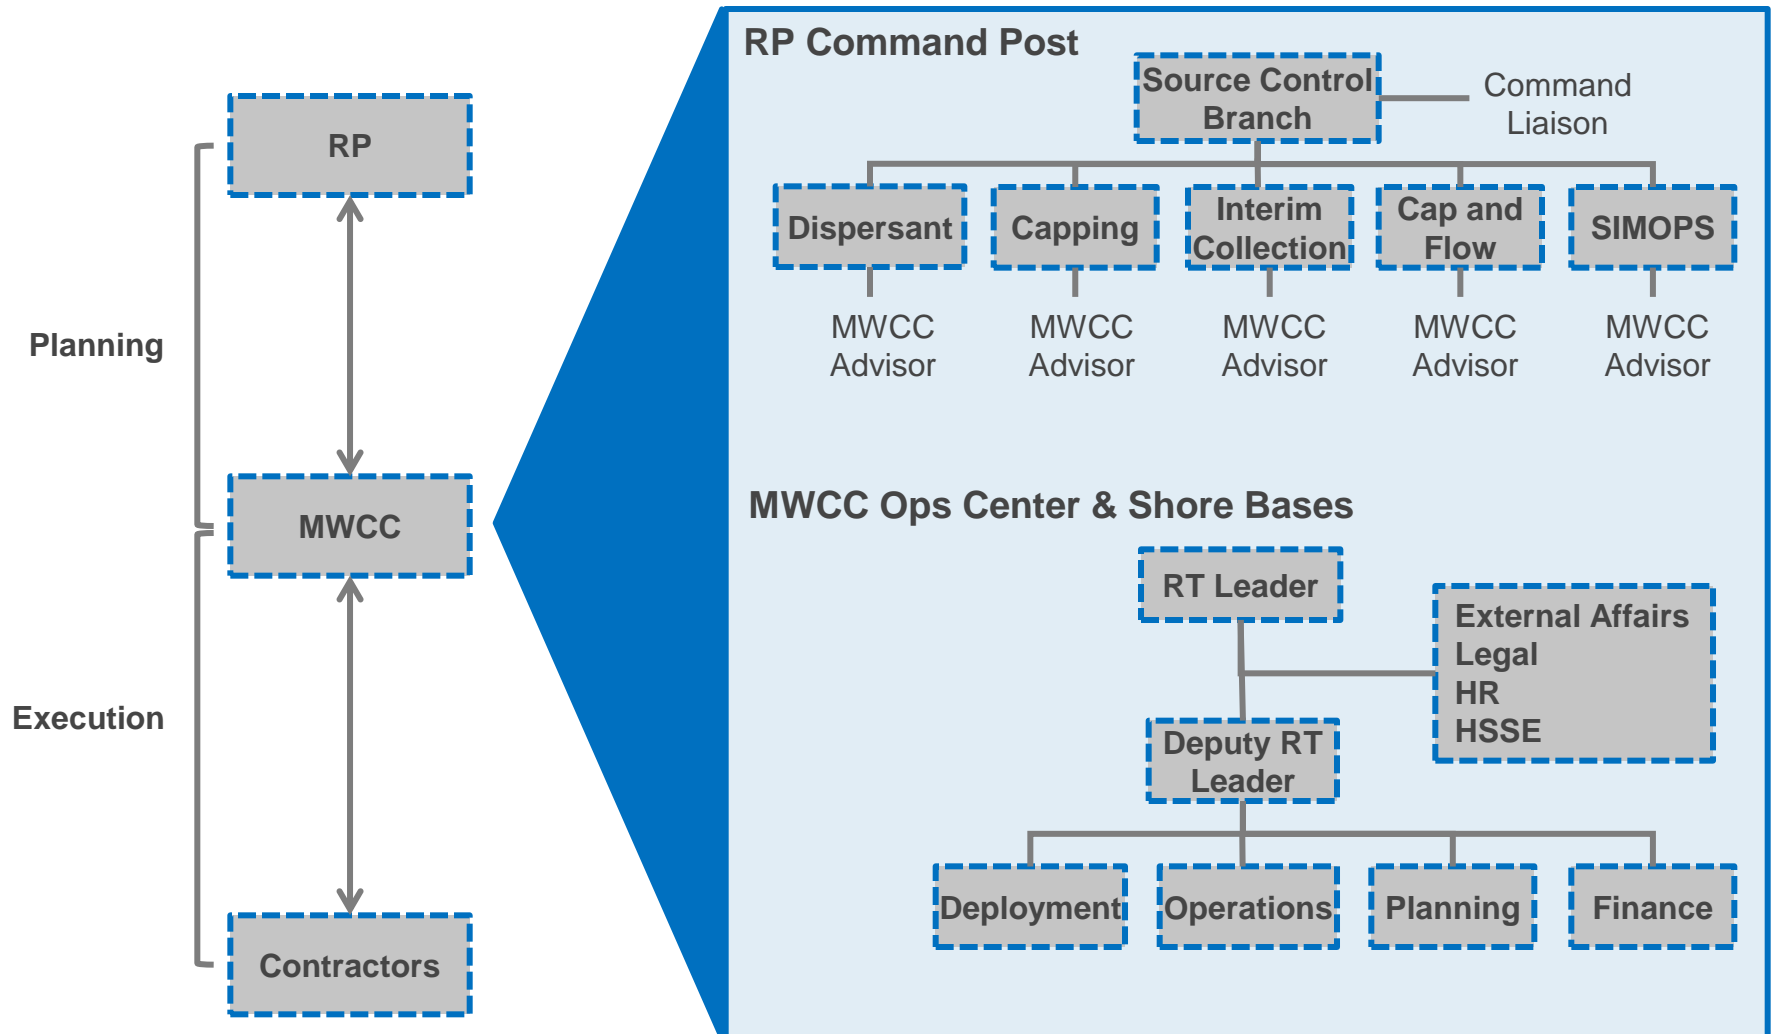

Demobilization & Decontamination

- Equipment Removal Following Containment Operations
- Equipment Decontamination

Source Control

The New Kid on the Block

2015 Conference and Exhibition

Source Control

- New and ongoing emphasis
- Critical to response
- Planned & exercised for efficiency and effectiveness
- Strong communications required regardless of location within ICS structure
